A guide to safely enjoy planet Earth

 OC

Humans are absolutely crazy!

Hello there readers of Galaxy Monthly, and welcome to this weeks instalment of the hottest locations to travel to, and this week we really have a scorcher!

As we all know the eyes of our entire galaxy have been sent towards the large, out of the way, planet earth, the thrill-seekers destination hotspot!

Earth is a class 6 death world but don't let the high gravity get you down, humans have some of the nicest hospitality around to cater for your every wish. So follow these steps to have a delightful stay at one of the many, many resorts on planet Earth!

1. Don't leave the resort. Unless you're planning on going on guided tours, we suggest you don't leave the hotel for some of the Earth areas have dangerous wildlife. Note-do not touch anything brightly coloured, especially small frogs, intern Ste'lar is currently in critical condition.
2. Do not partake in human radiation sessions. This is most commonly called 'sunbathing', but humans like to irradiate themselves for long periods of time after using the radiation blocker 'sun cream'. This is usually done to darken or 'tan' human skin. Note- we have created a 'sun cream' at factor 450 that is safe for most species to partake in 'sunbathing' for one hour, do not stay out for longer than one hour or you will have radiation burns. We wish Ste'lar a swift recovery.
3. Do not eat human food. Humans have a strong immune system and an even stronger gut so they eat pretty much everything (they are omnivores so no reason to worry about what foods will be served). We would advise going to what is called a 'Xeno bar' or ordering off of the 'Xeno menu' at places with them. Note- human drinks are dangerous too, they use a grape species for wine with high alcohol content. We wish the intern, Ste'lar, a quick and harmless replacement of his digestive system.
4. Do not use a power shower. It is insanely hot and can rip off your skin. Note- do not put it on a low setting it works the same, we hope Ste'lar will have a harmless skin graph on his neck and upper back alongside the rest of the radiated skin.
5. Do not have relations with humans. Ste'lar could not help himself, and now it will be a miracle if he has children...again.
6. Do not attend a foam party on a beach. Not only will the foam kick up the sand but the disinfectants can kill off the useful bacteria on the skin that kill microbes. Note- this also happens if you swallow it. Needless to say, Ste'lar has not been affected by this, because he needs a new stomach from the alcohol and grape poisoning.

7. Don't get in a fight with a human. Note-Mexican wrestling may result in loss of limb. A fundraiser for a new one can be found at the bottom for Ste'lar.
8. Don't gamble with humans. It seems humans can read facial cues in an instant and hide there's very well. Note- don't gamble in a game of poker or blackjack. Ste'lar is now massively in debt

Now that you know the don'ts we will leave the does up to you. Many popular destinations for our heat lovers are in our 'Africa' package where you can see many wonders of the ancient Earth in 'Egypt' with it's pyramids. Lovers of the humid environment will love our 'rainforests' package, where there is plenty of torrential rain, just don't leave the hotel. Risk-takers with the environment will love our 'British Isles' package. Not only has it got plenty of history, but there are also few dangerous animals and, for those environmental risk-takers, the weather is unpredictable! Except for the fact, it is normally raining and cold. So why not go to Earth? The people are lovely and, as long as you follow our eight-step guide you will have a lovely stay. Please note a fundraiser for Ste'lar is in all of this month's editions.

Gorg

Lovely planet, lovely people, just a shame about the gravity

Jea'carf

Had a great stay, humans couldn't be nicer, but something called a dog licked me and now I'm in hospital :(

Gortath
